

THE STATE OF MENOPAUSE IN INDIA 2026

The Workforce Opportunity No Employer Can Ignore

A benchmark report synthesizing publicly available research • Published by ResetWell Plus

More than 100 million Indian women are entering or living through menopause. Yet menopause remains one of India's least discussed health and workplace issues.

100M+ Menopausal women in India — one of the world's largest such populations	73.2% Employed women reporting moderate-to-severe menopausal symptoms	~10% Of women aged 45–60 report taking time off due to symptoms	Earlier Onset vs. many Western countries, extending symptomatic working years

Why This Matters

Careers are lengthening and more women are reaching senior leadership later in their working lives. That means a growing share of employees will experience menopause while at work — turning what has been treated as a private health matter into a live business issue: performance, retention, and leadership continuity all sit downstream of how well this transition is supported.

Key Symptoms Affecting Work

Sleep disturbance	Brain fog	Fatigue
Anxiety	Hot flashes	Joint pain / mood changes

MENOPAUSE IN THE WORKPLACE

Menopause is becoming a workforce issue — not just a healthcare issue.

What Global Evidence Shows

Challenge	Evidence
Productivity	Symptoms measurably reduce work ability and concentration.
Absenteeism	Up to ~10% of women aged 45–60 take time off for menopause-related issues.
Retention	Lack of support contributes to disengagement and workforce exits.
Disclosure	Stigma keeps many women from raising symptoms with managers.
Leadership	Mid-career women often move through menopause during peak leadership years.

Where India Stands

Area	Current State
Public awareness	Emerging
Workplace policies	Limited
Employer education	Early stage
Clinical access	Improving, but uneven
Digital menopause support	Rapidly emerging

The Opportunity for Employers

- Educate managers to recognize and respond to symptoms
- Normalize conversations about menopause at work
- Improve access to evidence-based clinical care
- Support mid-career women moving into senior leadership
- Reduce stigma around disclosure
- Strengthen retention and protect productivity
