

STATE OF MENOPAUSE IN INDIA - 2026

The Workforce Opportunity No Employer Can Ignore

A benchmark report synthesizing publicly available research • Published by ResetWell Plus

Menopause does not stay at home. For millions of professional women, it arrives at the office too. Yet menopause remains one of India's least discussed health and workplace issues.

10 Cr+

WOMEN

Indian women in menopause by 2026 (Indian Menopause Society)

46.6

YEARS

Average age at menopause in India (4–5 yrs earlier than high-income countries)

10%

WOMEN

Leave senior roles specifically, due to unmanaged menopause symptoms

\$1.8 Bn

LOSS

Annually in missed workdays in US due to menopause (Mayo Clinic, 2023)

Why this matters

Increased longevity is leading more women to reach senior leadership roles later in their working lives. That means a growing share of employees will experience menopause while at work — turning what has been treated as a private health matter into a live business issue: performance, retention, and leadership continuity all sit downstream of how well this transition is supported.

Key symptoms affecting work

Sleep problems, fatigue, and reduced ability to perform daily activities are strongly associated with poorer work ability.

Sleep disturbance	Brain fog	Fatigue	Anxiety
Reduced focus	Joint pain	Mood changes	Low confidence

Menopause in the workplace

Menopause is becoming a workforce issue — not just a healthcare issue.

01 50+ Years of Global Evidence

- Menopause clinics established across the UK, US & Scandinavia for decades
- HRT has been prescribed internationally since the 1960s–70s, with extensive long-term research
- Global care guided by organizations such as the British Menopause Society (BMS), and international evidence-based guidelines
- Treatment combines HRT, nutrition, exercise, mental health and lifestyle medicine
- Built on peer-reviewed, evidence-based protocols

02 India's Care Gap

- Menopause occurs 2–4 years earlier than in many Western populations
- Over 60 million Indian women are estimated to be in the peri- or menopausal transition at any given time (estimates vary by source)
- Most women receive symptom-based care rather than comprehensive menopause care
- Low awareness leads to delayed diagnosis and unnecessary suffering
- Opportunity for employer-led education and support

03 How we bridge the gap

- Founders' exposure to US Healthcare system for 25 years
- Purpose-built for India: language, access and knowledge sharing
- Clinician-designed, not just a consumer app

The Opportunity for Employers

- Support mid-career women moving into senior leadership
- Educate managers to recognize and respond to symptoms
- Normalize conversations about menopause at work; reduce stigma around disclosure
- Improve access to evidence-based clinical care
- Strengthen retention and protect productivity

Three takeaways

1

Menopause care is:

A productivity & retention issue, not just a wellness perk

2

CSR budget can fund it:

Schedule VII covers healthcare & women's empowerment – Preventive Health

3

First Movers Win:

Retain your women workforce and be the employer of CHOICE for them
